Apply filters to SQL queries

Project description

I've been assigned to examine the organization's data referring to their employees login attempts. I will use SQL to filter and retrieve records from different datasets and investigate the potential security issues.

Retrieve after hours failed login attempts

```
MariaDB [organization]> SELECT *
   -> FROM log_in_attempts
    -> WHERE login time > '18:00' AND success = 0;
 event id | username | login date | login time | country | ip address
                                                                            success

                                                 MEXICO
                                                          | 192.168.44.232
                                                                                    0
```

I wanted to investigate further into a potential security incident that happened after business hours. Here I retrieved failed login attempts after hours with the Select * from log_in_attempts where login_time > '18:00' and success = 0; This command returns all logins after 6pm that failed. A failed login is represented by the success column being 0; a successful login attempt would be represented by a 1.

Retrieve login attempts on specific dates

```
MariaDB [organization]> SELECT *
   -> FROM log in attempts
   ->
   -> WHERE login date = '2022-05-08' OR login date = '2022-05-09';
 event id | username | login date | login time | country | ip address
                                                                          success

```

A suspicious event occurred on 2022-05-09 so the team wanted to review all login attempts on that day and the day prior. Here I found logins on the different dates using the select * from log_in_attempts where login_date = '2022-05-08' or login_date = '2022-05-09';

Retrieve login attempts outside of Mexico

```
MariaDB [organization] > SELECT *
   -> FROM log in attempts
   ->
    -> WHERE not country LIKE 'mex%';
 event_id | username | login_date | login_time | country | ip_address
                                                                            success

                                                           192.168.85.186
                       2022-05-12
                                                 CANADA
                                                           192.168.58.232
                                    17:36:45
```

After the organizations investigation they came to the conclusion the suspicious activity did not originate from Mexico so I filtered Mexico out my search with where not country like 'mex%' and what returns are all logins that happened outside of mexico. The (%) sign ensures that in the country mex, or mexico doesn't show up in the query.

Retrieve employees in Marketing

```

```

The team also needed to update every departments machines excluding the IT department so I created a query to filter out the IT department by entering where not department = 'Information Technology';

Summary

I applied filters to the SQL queries to get the information needed. I also used (%) wildcard to filter for patterns. I also used operators such as AND, OR, and NOT. to get information as well.
